IL-17E, rat recombinant protein - Background

Rat IL-17E (IL-17E), is a proinflammatory cytokine member of a six-species family of proteins (IL-17A-17F). Rat IL-17E protein is a homodimer consisting of two 145 amino acids peptides. Recombinant rat IL-17E produced in E.coli is a non-glycosylated disulfide-joined homodimer having a molecular mass of 35.5 kDa.
