

Myostatin Proform, human recombinant protein
GDF-8, MSTN, Growth Differentiation Factor 8, MSTN Muscle Hypertrophy,
Catalog # PBV10334r

Specification

Myostatin Proform, human recombinant protein - Product info

Primary Accession [O14793](#)
Calculated MW **27.8 kDa KDa**

Myostatin Proform, human recombinant protein - Additional Info

Gene ID	2660
Gene Symbol	MSTN
Other Names	
GDF-8, MSTN, Growth Differentiation Factor 8, MSTN Muscle Hypertrophy,	
Gene Source	Human
Source	E. coli
Assay&Purity	SDS-PAGE; ≥98%
Assay2&Purity2	HPLC; ≥98%
Recombinant	Yes
Target/Specificity	
Myostatin	

Application Notes

Reconstitute in H₂O to a concentration of 0.1 to 1.0 mg/ml. This solution can then be diluted into other aqueous buffers

Format

Lyophilized protein

Storage

-20°C; Sterile filtered and lyophilized with no additives

Myostatin Proform, human recombinant protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Myostatin Proform, human recombinant protein - Background

Mature Myostatin is obtained by proteolytic processing of a biologically-inactive precursor protein, which contains an N-terminal propeptide of 243 amino acid residues. Myostatin Propeptide exhibits high binding affinity for myostatin and has been shown to be a potent inhibitor of Myostatin. Over-expression of myostatin propeptide in mice resulted in large increases (up to 200%) in skeletal muscle mass, similar to those observed in Myostatin knockout mice. Recombinant Human Myostatin Propeptide is a 27.8 kDa protein consisting of 244 amino acid residues
