VEGF120, murine recombinant protein - Images**VEGF120, murine recombinant protein - Background**

Vascular Endothelial Growth factor-A (VEGF-A) was originally isolated from tumor cells and is produced by a wide variety of cell types. In addition to stimulating vascular growth and permeability, VEGF-A may play a role in stimulating vasodilatation via nitric oxide-dependent pathways. Mouse VEGF-A has several variants, one being VEGF-120 (also known as VEGF-2). Recombinant Mouse VEGF-120 is a homodimer with a molecular weight of 28.2 kDa.
