

### SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein

NAD-dependent Deacetylase 1, SIR2L1, SIR2-like Protein 1, Sirtuin 1, Silent Information Regulator 2

Catalog # PBV10889r

# **Specification**

# SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein - Product info

Primary Accession <u>Q96EB6</u>

Calculated MW 82.9 kDa KDa

### SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein - Additional Info

Gene ID 23411
Gene Symbol SIRT1

**Other Names** 

NAD-dependent Deacetylase 1, SIR2L1, SIR2-like Protein 1, Sirtuin 1, Silent Information Regulator 2

Gene Source Human Source E. coli

Assay&Purity SDS-PAGE; ≥60%

Assay2&Purity2 N/A; Recombinant Yes

Results ≥ 550 pmol/min/mg

**Target/Specificity** 

SIRT1

Format Liquid

#### **Storage**

-80°C; Supplied as a solution in 50 mM sodium phosphate, pH 7.2, containing 100 mM sodium chloride and 20% glycerol

### SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

### SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein - Images

### SIRT1 (193-747 aa) (GST-tagged), Human recombinant protein - Background

The sirtuins represent a distinct class of trichostatin A-insensitive lysyl-deacetylases (class III HDACs) and have been shown to catalyze a reaction that couples lysine deacetylation to the formation of nicotinamide and O-acetyl-ADP-ribose from NAD+ and the abstracted acetyl group. There are seven human sirtuins, which have been designated SIRT1-7. SIRT1, which is located in the nucleus, is the human sirtuin with the greatest homology to yeast Sir2 (Silent information regulator 2) and has been shown to regulate the activity of the p53 tumor suppressor and inhibit apoptosis. These results have significant implications regarding an important role of SIRT1 in modulating the sensitivity of cells in the p53-dependent apoptotic response and the possible effect in cancer therapy. Since the growth suppressive function of p53 is strongly enhanced by DNA damaging reagents, it is expected that inhibitors of SIRT1 may be effective anti-cancer drugs.
