

Galectin-2, mouse recombinant
Lgals2, 2200008F12Rik, AI324147, Gal-2
Catalog # PBV11526r

Specification

Galectin-2, mouse recombinant - Product info

Primary Accession [O9CQW5](#)
Calculated MW **17.3 kDa KDa**

Galectin-2, mouse recombinant - Additional Info

Other Names

Lgals2, 2200008F12Rik, AI324147

Galectin-2, mouse recombinant - Background

Galectin 2, also known as Lgals2, belongs to the galectins family. Galectins are a family of soluble beta-galactoside-binding animal lectins that modulate cell-to-cell adhesion and cell-to-extracellular matrix (ECM) interactions and play a role in tumor progression, pre-mRNA splicing and apoptosis. Lgals2 is a monomeric or homodimeric prototype galectin that is expressed in hepatoma, stomach epithelial cells and in colorectal and neural tumors. It induces apoptosis in activated T cells and binds to the cytokine lymphotoxin-a (LTA) with possible implications in risk of myocardial infarction. Human and mouse Lgals2 share approximately 65% amino acid sequence similarity. Recombinant Mouse Lgals2 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
