

I-309/CCL1
Catalog # PVGS1455**Specification**

I-309/CCL1 - Product Information

Primary Accession [P22362-1](#)
Species
Human

Sequence
Lys24-Lys96

Purity
> 98% as analyzed by SDS-PAGE

Endotoxin Level
< 0.2 EU/ µg of protein by gel clotting method

Biological Activity
The EC₅₀ value of human I-309/CCL1 on Ca²⁺ mobilization assay in CHO-K1/ G15/hCCR8 cells (human G15 and human CCR8 stably expressed in CHO-K1 cells) is less than 1.0 µg/ml.

Expression System
CHO

Formulation **Lyophilized after extensive dialysis against PBS.**

Reconstitution
It is recommended that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute the lyophilized powder in ddH₂O or PBS up to 100 µg/ml.

Storage & Stability
Upon receiving, this product remains stable for up to 6 months at lower than -70°C. Upon reconstitution, the product should be stable for up to 1 week at 4°C or up to 3 months at -20°C. For long term storage it is recommended that a carrier protein (example 0.1% BSA) be added. Avoid repeated freeze-thaw cycles.

I-309/CCL1 - Additional Information

Target Background
Chemokine (C-C motif) ligand 1 (CCL1), also known as I-309, is a small glycoprotein secreted by activated T cells that belongs to the family of chemokines. Human CCL1 has been assumed to be a homologue of mouse TCA3. While the two proteins share only approximately 42% amino acid sequence identity, both chemokines contain an extra pair of cysteine residues not found in most other chemokines. CCL1 attracts monocytes, NK cells, immature B cells and dendritic cells by interacting with the cell surface chemokine receptor CCR8. This chemokine resides in a large cluster of CC chemokines on human chromosome 17.

I-309/CCL1 - Protein Information**I-309/CCL1 - Protocols**

Provided below are standard protocols that you may find useful for product applications.
