

#### **IGF-I**

Catalog # PVGS1467

## **Specification**

#### **IGF-I - Product Information**

Primary Accession
Species
Human

P05019

#### **Sequence**

Gly49-Ala118, expressed with an N-terminal Met

## **Purity**

> 95% as analyzed by SDS-PAGE

### **Endotoxin Level**

< 0.2 EU/  $\mu g$  of protein by gel clotting method

## **Biological Activity**

ED<sub>50</sub> < 5.0 ng/ml, measured by a cell proliferation assay using FDC-P1 cells, corresponding to a specific activity of >  $2.0 \times 10$ <sup>5</sup> units/mg.

## **Expression System**

E. coli

Formulation

Lyophilized after extensive dialysis against

#### Reconstitution

It is recommended that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute the lyophilized powder in  $ddH_2O$  or PBS up to  $100 \mu g/ml$ .

#### Storage & Stability

Upon receiving, this product remains stable for up to 6 months at lower than -70°C. Upon reconstitution, the product should be stable for up to 1 week at 4°C or up to 3 months at -20°C. For long term storage it is recommended that a carrier protein (example 0.1% BSA) be added. Avoid repeated freeze-thaw cycles.

## **IGF-I - Additional Information**

#### **Gene ID 3479**

## **Other Names**

Insulin-like growth factor 1 {ECO:0000312|HGNC:HGNC:5464}, Insulin-like growth factor I, IGF-I, Mechano growth factor, MGF, Somatomedin-C, IGF1 (<a href="http://www.genenames.org/cgi-bin/gene\_symbol\_report?hgnc\_id=5464" target="\_blank">HGNC:5464</a>)

## **Target Background**

Insulin-like growth factor I (IGF-I) also known as Somatamedin C is a hormone similar in molecular

structure to insulin. Human IGF-I has two isoforms (IGF-IA and IGF-IB) which are differentially expressed by various tissues. Mature human IGF-I shares 94% and 96% aa sequence identity with mouse and rat IGF-I, respectively. Both IGF-I and IGF-II (another ligand of IGF) can signal through the IGF-I receptor (IGFIR), but only IGF-II can bind the IGF-II receptor (IGFIR/ Mannose-6-phosphate receptor). IGF-I plays an important role in childhood growth and continues to have anabolic effects in adults.

### **IGF-I - Protein Information**

Name IGF1 (HGNC:5464)

### **Function**

The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity. May be a physiological regulator of [1-14C]- 2-deoxy-D-glucose (2DG) transport and glycogen synthesis in osteoblasts. Stimulates glucose transport in bone-derived osteoblastic (PyMS) cells and is effective at much lower concentrations than insulin, not only regarding glycogen and DNA synthesis but also with regard to enhancing glucose uptake. May play a role in synapse maturation (PubMed: <a href="http://www.uniprot.org/citations/21076856" target=" blank">21076856</a>, PubMed:<a href="http://www.uniprot.org/citations/24132240" target="\_blank">24132240</a>). Ca(2+)-dependent exocytosis of IGF1 is required for sensory perception of smell in the olfactory bulb (By similarity). Acts as a ligand for IGF1R. Binds to the alpha subunit of IGF1R, leading to the activation of the intrinsic tyrosine kinase activity which autophosphorylates tyrosine residues in the beta subunit thus initiating a cascade of down-stream signaling events leading to activation of the PI3K-AKT/PKB and the Ras-MAPK pathways. Binds to integrins ITGAV:ITGB3 and ITGA6:ITGB4. Its binding to integrins and subsequent ternary complex formation with integrins and IGFR1 are essential for IGF1 signaling. Induces the phosphorylation and activation of IGFR1, MAPK3/ERK1, MAPK1/ERK2 and AKT1 (PubMed:<a href="http://www.uniprot.org/citations/19578119" target=" blank">19578119</a>, PubMed:<a href="http://www.uniprot.org/citations/22351760" target="blank">22351760</a>, PubMed:<a href="http://www.uniprot.org/citations/23243309" target=" blank">23243309</a>, PubMed:<a href="http://www.uniprot.org/citations/23696648" target="blank">23696648</a>). As part of the MAPK/ERK signaling pathway, acts as a negative regulator of apoptosis in cardiomyocytes via promotion of STUB1/CHIP-mediated ubiquitination and degradation of ICER-type isoforms of CREM (By similarity).

## **Cellular Location**

Secreted {ECO:0000250|UniProtKB:P05017}.

# **IGF-I - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
