

MSLN/Mesothelin

Catalog # PVGS1749

Specification

MSLN/Mesothelin - Product Information

Primary Accession **Species**

Q61468-1

Mouse

Sequence Asp298-Ser600

Purity

Endotoxin Level

Less than 1EU per μg by the LAL method.

Biological Activity

Immobilized MSLN/Mesothelin(298-600), His, Mouse(Cat.No.: Z03876) at 2 μ g/ml(100 μ l/Well) on the plate can bind Biotinylated Human CA125, His Tag.

Expression System

HEK293

Theoretical Molecular Weight

35.2 kDa

Formulation Lyophilized from a 0.22 µm filtered solution in PBS, pH 7.4.

Reconstitution

Centrifuge the tube before opening. Reconstituting to a concentration more than 100 μ g/ml is recommended. Dissolve the lyophilized protein in distilled water.

Storage & Stability

Upon receiving, the product remains stable up to 6 months at -20 °C or below. Upon reconstitution, the product should be stable for 3 months at -80 °C. Avoid repeated freeze-thaw cycles.

MSLN/Mesothelin - Additional Information

Target Background

Mesothelin, also known as MSLN, is encoded by the MSLN gene. It encodes a precursor protein of 71 kDa that is processed to a 31 kDa shed protein called megakaryocyte potentiating factor (MPF) and a 40 kDa fragment, mesothelin. MSLN is attached to the cell membrane by a glycosyl-phosphatidylinositol (GPI) anchor. It is a differentiation antigen which is highly expressed in several human cancers, including virtually all mesotheliomas and pancreatic adenocarcinomas.

MSLN/Mesothelin - Protein Information

MSLN/Mesothelin - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
