RBC Lysis Buffer (10X) - Images

Human peripheral blood cells were lysed with RBC Lysis Buffer. The scatter profile of lysed cells is shown.

RBC Lysis Buffer (10X) - Background

RBC Lysis Buffer (10X) is a concentrated ammonium chloride-based lysing reagent. The diluted 1X working solution will lyse red blood cells in single cell suspensions with minimal effects on

leukocytes. RBC Lysis Buffer (10X) does not contain a fixative so the cells remain viable after red blood cell lysis.
